

Dan Clark, Associate Professor of Mathematics

For the last several years, I have been analyzing WKU's health insurance plans in terms of what might be best for employees and how premium/deductible/out of pocket maximum changes interact with changes to salaries. Before my time at WKU, I was in the leadership of the teaching assistant's union at my graduate school. In that role, I helped members understand their benefits as well as negotiated benefits on their behalf. I believe these experiences and skills position me well to be of use to both WKU and faculty/staff on the benefits committee.
